X = function not provided

na = not applicable

Table 1 (PJ Matthews 25-3-15)

Jamroom module settings for different media types (Audio, Text, and Static Image).

Audiovisual is not included here as management of audiovisual media is based on proprietary systems (Vimeo and Youtube) that have their own access control systems in place.

* NB Has anyone set up a system for soundmarking audio files?! This might be very useful for sound artists...
