

I do use the music.tpl from projam as my homepage as well.

Song is unchecked for downloadable. Default is set to yes

Shows up on the home page just fine, but shows downloadable. That is with me logged in as admin

If I am logged out it shows the same.

The only file I edited was based off this document.

<https://www.jamroom.net/the-jamroom-network/forum/using-jamroom/2658/mod-audio-support-song-download-checkbox> and here

<https://www.jamroom.net/the-jamroom-network/documentation/howto/1389/howto-allow-downloads-to-logged-in-users>

I just read them again and it only states to edit the item_detail file located on this document

<https://www.jamroom.net/the-jamroom-network/documentation/howto/1389/howto-allow-downloads-to-logged-in-users>

I do not have

jrAudio_item_detail.tpl" in the ProJam skin

When I said it was working that was also prior to installing foxyart. I am just not sure what to edit.

Bottom line is if a user does not want his song to be downloaded only streamed that does not appear to be the case.
